Frequently Asked Questions

Where is the etching located?

It is located on the shutoff body shown as shown in a sample shown to the right.

How big of an area is there for my logo or text to fit?

It is a rectangle-size area about the size of a standard mailing address label, 1" High x 2.25" Wide

What products can be custom laser etched?

Only XD handline series shutoff bodies. They can be a part of a standalone XD shutoff, or part of a one-piece XD fog nozzle. Individual smooth bore tips or XD fog nozzle tips cannot be custom laser etched as there is just not enough available room.

What kind of file do I need to submit to get the best-looking logo possible?

The file must be of the original artwork in one of the following formats: jpg, jpeg, png, dxf. It MUST be at least 300 dpi and in pure black and white only. We will NOT accept scans or photos of patches or logos and will not recreate any artwork for custom laser etching. Keep in mind the space available for etching mentioned above. Paying close attention to these details will ensure that you end up with a one-of-a-kind customized XD nozzle!

Good Example:

- Simple Logo
- Pure black and white
- Fills rectangle area

Bad Example:

- Detailed and Complex Logo
- Full Color
- Square shape will be small on final etch

****DISCLAIMER****

If supplying artwork, you are acknowledging that you own the rights or have permission to use the artwork provided. You indemnify and hold harmless Elkhart Brass Manufacturing Company LLC from any and all liabilities incurred from any third-party trademark or copyright infringement claim. Further, if you incorrectly claim rights to digital artwork, whether inadvertently or intentionally, and the artwork is later required to be removed, the costs of removal and of replacement products will be borne by you (the customer) and not Elkhart Brass Manufacturing Company LLC.
